Printing from iPad or Tablet

Previously you needed to have a special Apple Printer to be able to print from your iPad or iPhone, or to have a special Samsung printer to print from a Samsung tablet, etc. well not any more.

Some modern WiFi printers are smart enough to have their own eMail address. So what this means is that when you want to print something to that printer – you simply need to send - whatever you want to print - to an eMail address.

This works for: iPad, iPhone, Tablet smart phone, even your desktop computer. Start by entering the details into your Contacts, that is, a name like “WiFi Printer” and the eMail address supplied with the Printer. The printer will need to be connected to a WiFi router. Then if you want to print an eMail from your iPad, Tablet or smart phone, simply forward the eMail to the contact called “WiFi Printer”. If instead you want to print a picture, if it’s a tablet you attach the picture to a new eMail, or if it is an iPad or iPhone, you select the picture and then eMail it.

Also depending on your printer, the iPad might give you the document PRINT option on the iPad as well.

So what you need to make this happen is a modern printer. Check with your supplier before you make your next printer purchase.
